## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 61-72 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claim 61 recites "the curvatures in a sub-scanning direction of at least two of the surfaces of said imaging lens vary continuously along a main scanning direction over the effective area of said imaging lens and independently of the curvatures in the main scanning direction, and wherein the curvatures in the main and sub-scanning directions are non-symmetrical with respect to the optical axis" (lines 4-10); the phrase "at least two of the surfaces" in the recitation also contains three or four surfaces. However, Table 6 (specification, page 53) provides sufficient numerical data for only "two of the surfaces of said imaging lens"; other surfaces (lens 76a in Figs. 24A-24B) are disclosed as spherical surfaces. There is not sufficient numerical data provided for a third surface and/or a fourth surface of the imaging lens that has a curvature in a sub-scanning direction varies continuously along a main scanning direction over the effective area of said imaging lens and independently of the curvatures in the main scanning direction, and wherein

the curvatures in the main and sub-scanning directions are non-symmetrical with respect to the optical axis; also, an imaging lens having three or four surfaces each has a curvature as discussed above would have a particular arrangement and optical characteristics. Thus, one of ordinary skilled in the art would not be able to make and/or use the invention without undue experimentation.

***Interference***

Until at such time the rejection of claims 61-72 under 35 U.S.C. 112, first paragraph, is overcome, a granting of the request for interference is deferred.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James Phan whose telephone number is (703) 308-4810. The fax phone number for this Group is (703) 308-7722.
